

Energy-Related Sustainable Development Goals

7- Affordable and clean energy

This goal aims to make energy more AFFORDABLE, RELIABLE and SUSTAINABLE.

AFFORDABLE because:

1 in 10 people worldwide don't have access to electricity. *Source: U.N.*

So we need to continue working toward electrification, particularly in isolated rural areas.

RELIABLE because:

3 billion people cook at home with ill-adapted appliances that use wood or coal. *Source: U.N.*

The resulting toxic fumes pollute the inside air and put people in danger.

Solution: reduce fumes thanks to devices that use much less wood or coal.

SUSTAINABLE because:

Energy represents around 60% of the world's greenhouse gas emissions. *Source: U.N.*

This means it is vital to increase the use of renewables, sourcing energy from water, wind, the Sun and waste.
